### Special Relativity From Einstein To

In 1905, Albert Einstein published the theory of special relativity, which explains how to interpret motion between different inertial frames of reference — that is, places that are moving at constant speeds relative to each other.

### Einstein's Special Relativity - dummies

A thorough introduction to Einstein's special theory of relativity. It aims to teach special relativity and related topics to people who are interested in mathematics and have already passed a first year of physics with calculus. It is important because it teaches special relativity in a comprehensive manner as a theory of spacetime geometry ...

The theory of special relativity was developed by Albert Einstein in 1905, and it forms part of the basis of modern physics. After finishing his work in special relativity, Einstein spent a decade pondering what would happen if one introduced acceleration.

Relativity - Relativity - Special relativity: Scientists such as Austrian physicist Ernst Mach and French mathematician Henri Poincaré had critiqued classical mechanics or contemplated the behaviour of light and the meaning of the ether before Einstein.

### Einstein and The Special Theory of Relativity

Special relativity was originally proposed by Albert Einstein in a paper published on 26 September 1905 titled "On the Electrodynamics of Moving

Bodies". [p 1] The incompatibility of Newtonian mechanics with Maxwell's equations of electromagnetism and, experimentally, the Michelson-Morley null result (and subsequent similar experiments) demonstrated that the historically hypothesized luminiferous aether did not exist.

### **Special relativity - Wikipedia**

Thus over the course of several years (1908–1915), Einstein developed general relativity. This theory includes the replacement of Euclidean geometry by non-Euclidean geometry, and the resultant curvature of the path of light led Einstein (1912) to the conclusion that (like in accelerated frames)...

General relativity is a theory of gravitation developed by Einstein in the years 1907–1915. The development of general relativity began with the equivalence principle, under which the states of accelerated motion and being at rest in a gravitational field (for example, when standing on the surface of the Earth)...

### **Theory of relativity - Wikipedia**

In 1915, Einstein published his theory of general relativity to factor gravity into the relativistic view of the universe. The key concept to remember is the equivalence principle, which states that gravity pulling in one direction is equivalent to acceleration in another.

### **What's So Special About Special Relativity?**

It was pondering these developments that led Einstein to discover the special theory of relativity in 1905. The discovery was not momentary. The theory was the outcome of, in Einstein's own reckoning, seven and more years of work. He even places one of his early landmarks in a thought experiment he had at the age of 16, in 1896, nine years before the year of miracles of 1905.

### **Einstein's Pathway to Special Relativity**

It is not the depth of mathematics that makes Einstein's special relativity challenging. It is the degree to which the ideas are foreign and apparently inconsistent with our everyday experiences.
